## Managing Knowledge in a Team

This overview of knowledge management tools was created with cooperation in teams in mind. Tools that do not fulfill this criterion were not taken into consideration. Since new tools are continually being developed, we make no claims that this overview is exhaustive. The status as of 30 September 2015 has been included.

The overview is structured as follows: First the various possibilities for teamwork and project planning for teams are shown. Then you will find the classic functions of reference management and processing references with the help of Office programs. Finally, technical details and license possibilities are described.
